nextKast

Internet Radio Automation Software

No complicated Databases / Clean User Interface

NextKast uses .mp3 tags and flat files and windows folder structure to store information about the operation, this eliminates the need to set up a Database, and makes setup much quicker and simple. Logs are still kept and can be used in any external database if desired

Features That Make your Station Sound Professional

Adjustable Cross fade Times, Easy to implement Sweepers, Intro and Outro Marks, automatic Silence Trim, adjustable Audio Processing and many more features that give your station a professional sound.

Grow Your Audience with help from nextKast

With unique features like audience pleaser and song tune in/out statistics, play more of the music you audience wants. TuneIn AIR API is also built in to help give a better audience experience to listeners who use TuneIN.com

Music Scheduler + Playout Systems + Encoder in ONE

Everything you need, no need for separate modules. Schedule, Play, and broadcast from one software

Drag and Drop or Menu Driven

Import tracks and modify setup using a touch screen or by standard windows right click menu options

Run In Auto-Rotation Mode

Create one rotation or many and just let them run, nextKast will separate songs and Artist automatically, and will run through and pick songs automatically.

Schedule Rotations or Playlists as needed

Rotations or Playlists can be scheduled to start at hour or minute intervals in weekly format

Top Of the Hour

Simple method of setting top of the Hour station ID's and the ability to force TOH breaks on the exact top of hour

USA Based Development and Support

nextKast

Internet Radio Automation Software

Built In Voice Tracking and Playlist Generation

Generate playlist up to 30 days in advance and pre-record and place voicetracks in. Playlist generator uses rotation scheduler, which makes it seemless.

Run studio and broadcast soundcards separately

NextKast uses default soundcard as studio audio by default. A separate broadcast sound card can be used to stream just what should be on air (in case of fm/am broadcast) using a second sound card.

Air Skype/VOIP calls

Air Skype or VOIP call using our line in feature with instructions from our website. Second sound card and patch cable required.

Run in Automated or Manual Mode

Easily drag tracks and run in manual mode, while doing live Mic breaks, or run in Automated mode.

Microphone Input

Run Microphone directly into nextKast, set attenuation level and mic level. Set mic to run directly to stream to avoid delay in ear.

Update Song Catagories Visually

Using visual category folders to organize your music allows for the ability to visually create and modify more effective rotations

Record your shows Live

Built in recorder to record your shows and re-play them later

Assignable Audio FX buttons

Assign up to twelve sound fx buttons/music beds with shortcut keys

Created by an Internet Radio Operator

We use nextKast on our own station 24/7
