

# Setting Up Remote Voice Tracking using NextKast

1. Create a “nextKastRemote” (name is up to you) directory on your C:// Drive of your Broadcast machine
2. If you have already been running NextKast then copy these Folders from broadcast machines c:/nextkast directory to the newly created “nextKastRemote” Folder:
  - /Music
  - /Playlist
  - /Rotations
  - /Samples
  - /Station Drops
  - /Sweepers
3. Once all folders have been copied, Get the Google drive, and install Google drive Software onto your machine.
4. During Google drive setup on the step 4 of 4 select advanced setup, then change folder location to the “nextKastRemote” directory you created and copied folders to and press ‘start sync’ button
5. Once Google drive has synced you will set the broadcast machines system drive in the settings window to the “nextKastRemote” folder. You will have to restart NextKast for this to take effect.
6. On the Voice Track Machine then create the “nextKastRemote” folder on the c drive as was done on the broadcast machine
7. Install Google drive as before on Voice Track Machine :  
During Google drive setup on the step 4 of 4 select advanced setup, then change folder location to the “nextKastRemote” directory you created and copied folders to, and press ‘start sync’ button
8. On Voice Track machine set the remote drive to “nextKastRemote” in the Settings Window.
9. Anytime you work on the VT machine make sure to pause Google drive, when done resume Google Drive
10. All actions like generating playlists, Recording Voicetracks, Moving Tracks, etc will be reflected on both Broadcast and VT Machine
